Weekly Summary of TDX Tickets

Overview

Weekly Summary

Ticket volume remained high this week with 254 items processed across Maizey, U-M GPT Toolkit, Claude/Anthropic, and access/eligibility topics. The dominant workstreams were access questions (eligibility, shortcodes, API keys), Maizey indexing/performance, and Claude Code installation/support. Several operational fixes were completed (Maizey reindex bug, API gateway changes), but recurring documentation and licensing gaps continue to generate repeat requests. A subset of tickets require follow-up with users or partner teams (ARC, procurement, Anthropic).

Major Themes

- Access and eligibility: many tickets about who can get Claude Code / U-M GPT Toolkit keys and sponsor/shortcode requirements
- Maizey usage and stability: indexing, reindex scheduling, data-source design and billing questions
- Claude/Anthropic operational issues: local installs, config/settings.json problems, model availability and licensing limits for students

Ticket Counts

- Number of Total Tickets: 254
- Number of Open Tickets: 218
- Number of Closed Tickets: 36

Key Problems / Friction

- Shortcode and billing confusion: users repeatedly ask which Maizey features incur charges and the KB/page contains a broken Billing Shortcode link.
- Student access to Claude / Claude Code blocked by licensing; many classroom and student-project requests are blocked or require sponsorship workarounds.
- API key migration / model availability friction: old API keys being retired and differing gateway URLs (/v1/ vs root) caused user errors; HPC proxy configuration is preventing UM-GPT access on compute clusters.

Unaddressed / Needs Attention

- **Locolab AI** ([REDACTED]) - currently set to "Awaiting User Info"; follow-up needed to confirm where the user queried the model and provide guidance on available models in our environment.
- **UM Claude Code** [REDACTED] - on hold awaiting user scheduling information; needs scheduling or closure.
- **UM Claude Code** [REDACTED] awaiting user response; follow-up required to continue troubleshoot.
- **Collaborating with ITS to Develop Maizey Knowledge Base** [REDACTED] - currently "Awaiting User Info"; coordination needed to schedule working session and finalize KB updates.
- **Help w** [REDACTED] set to "Awaiting User Info"; user follow-up required to verify project visibility after UI redesign.
- **Access UM-GPT within HPC** [REDACTED] - proxy configuration on Great Lakes/Armris prevents access; requires ARC coordination to apply NO_PROXY exception for umgpt gateway.

Recommended Attention Areas

- Fix KB/documentation: repair the broken Billing Shortcode link and add a clear "shortcode & billing" FAQ for Maizey and Toolkit; include explicit examples for sponsored students and GSRA workflows.
- Coordinate with Procurement/Legal and Anthropic contact (if available) to define a roadmap and communications plan for Claude student access or alternative offerings; meanwhile, publish an official guidance note for instructors and students summarizing workarounds (sponsorship, Codex/OpenAI models).
